Partnerships for Habitat Improvement

*Challenge Cost-Share Program
1992 Report*

May 1993

Acknowledgments

The Wildlife and Fisheries Staff of the Washington Office, USDA Forest Service, thanks all who participated in the 1992 Challenge Cost-Share Program. In particular, we acknowledge the commitment and enthusiasm of the staff members on participating national forests and ranger districts for their outstanding efforts in building and strengthening the Challenge Cost-Share Program.

This report was prepared by Beth Giron Pendleton, WO Wildlife and Fisheries Staff. Special thanks to Antoinetta Grant, Jill Anderson, and Donal Hogan, WO Wildlife and Fisheries Staff, for data compilation and production assistance.

EXECUTIVE SUMMARY

The *Challenge Cost-Share Program* made another strong showing in 1992. The Forest Service and its partners turned \$11.5 million in congressionally appropriated funds into nearly \$26.7 million in completed habitat improvement projects. The number of partners has grown from 57 when the program began in 1986 to nearly 2,500 in 1992.

Partners helped make possible the completion of 2,111 habitat improvement projects for wildlife, fish, and rare plants on national forests and grasslands. Projects included structural improvements such as watering guzzlers for elk, roosting boxes for bats, and fencing fragile streambanks to protect rare plants. Non-structural improvements included use of prescribed burning to improve forage conditions for white-tailed deer, wild turkey, and grouse and seeding roadsides to enhance turkey nesting and brood-rearing habitat.

Background

In 1986, the United States Congress established the *Challenge Cost-Share Program*—a unique venture in which the State and private sectors share in both the management and cost of Federal habitat improvement programs. Congressional funding of Forest Service *Challenge Cost-Share* projects is contingent upon receipt of matching contributions from conservation groups, private enterprises, individuals, or other public agencies.

The program is designed to encourage direct public involvement in managing wildlife and fish habitats on national forests and grasslands. The Forest Service, in partnership with the Wildlife Management Institute, developed the “Join Us” campaign to invite individuals, organizations, and agencies to become partners in sharing the costs of wildlife and fisheries management. Partnerships can involve matching monies, labor, and equipment or sharing technical skills. But in all cases, the results are the same—on-the-ground resource improvements to benefit wildlife, fish, rare plants, and people.

In 1992, the Forest Service had active partnerships with thousands of people from hundreds of organizations and agencies like The American Fisheries Society, Boy Scouts of America, Defenders of Wildlife, Ducks Unlimited, Garden Club of America, National Fish and Wildlife Foundation, National Wild Turkey Federation, The Nature Conservancy, Rocky Mountain Elk Foundation, Sport Fishing Institute, and Trout Unlimited. Partners also included representatives from government agencies on all levels, including 44 State fish and wildlife agencies, 43 State Natural Heritage Inventory Programs, the Bureau of Land Management, and the U.S. Fish and Wildlife Service.

Fiscal year 1992 was our seventh year of sharing habitat improvement opportunities, and the accomplishments of this program continue to indicate a high level of support and commitment from the public for enhancing wildlife, fish, and rare plant habitats on national forests and grasslands.

Program Goal

The goal of the *Challenge Cost-Share Program* is to restore, improve, or maintain the fish, wildlife, and rare plant habitats on national forests and grasslands through active partnerships among the Forest Service and conservation and service organizations, other government agencies, private groups, and individuals. Partnerships have proven to be a very successful, and mutually beneficial, way of doing business.

An effective partnership requires a mutual interest in some goal or value on the part of participating parties. Participation is voluntary and mutual benefit is the driving force. As noted above, the types of projects are as diverse as the partners involved in this exciting program.

In addition to improving habitats and our knowledge of wildlife, fish, and rare plants, the *Challenge Cost-Share Program* strengthens communication among Agency managers and individuals, conservation groups, and other groups who care about national forest and grassland resources. The partnership approach to getting the job done expands Agency resources while enhancing habitats for many values and uses. The *Challenge Cost-Share Program* is

truly the Forest Service mission in action: *Caring for the Land and Serving People*.

Accomplishments in 1992

The Forest Service and 2,490 partners (appendix A, figure 1) completed 2,111 *Challenge Cost-Share* projects (figure 2) in 1992. Total partners' contributions of labor, materials, expertise, and cash exceeded \$15.1 million (figure 3), more than matching the Forest Service's monetary contribution of \$11.5 million (figure 4). Combined contributions to the *Challenge Cost-Share Program* for fiscal year 1992 were nearly \$26.7 million. Trends in Forest Service and partner contributions (figure 5) and contributions by region for fiscal year 1992 (figure 6) are also displayed in appendix A.

The Forest Service's Wildlife, Fish, and Rare Plants Program spent more than \$11.5 million of appropriated funds for habitat management in four areas: wildlife; inland fisheries; anadromous fisheries (salmon, steelhead, and sea-run cutthroat trout); and threatened, endangered, and sensitive species (appendix A, figure 4).

Pine Marten. (Photo by USDA Forest Service)

In 1992, the Forest Service and its partners completed 183,648 acres of habitat improvements for wildlife, fish, and threatened, endangered, and sensitive species. In addition, 705 miles of streams were improved for inland fish, such as walleye and bass, and anadromous fish, such as salmon, steelhead, and sea-run cutthroat trout.

Structural improvements totaled 6,146 and included nesting platforms for waterfowl and cave gates for bats. Partners also assisted in the completion of more than 8.8 million acres of habitat inventories for wildlife and threatened, endangered, and sensitive species. In addition, 2,040 miles of streams were inventoried in 1992.

Partnership Initiatives

The Forest Service has developed several major program themes as part of its increased emphasis on fisheries, wildlife, and rare plants. *Rise to the Future!*, the fisheries program, coordinates aquatic habitat management goals, plans, and programs with State, Federal, and tribal agencies and fish interest groups. Currently, *Rise to the Future!* management activities focus on inland fish—such as walleye, trout, bass, and nongame fish (e.g., various darters, shiners, and chubs)—mussels, aquatic insects, amphibians, and other aquatic species, as well as anadromous fish.

Through *Rise to the Future!*, the Forest Service has developed strong partnerships with major fisheries conservation groups, government agencies, researchers, and the angling public to protect, restore, and enhance aquatic habitats. Partnerships also support monitoring of river, stream, and lake habitats and interpretive, educational, and recreational opportunities for forest visitors. In 1992, partners assisted the Agency in completing 483 *Rise to the Future!* projects.

Get Wild!, the wildlife program, is designed to ensure continued availability of healthy habitats for all terrestrial wildlife species. Successful implementation of this program involves coordination with State and Federal agencies, as well as wildlife interest groups, to inventory and improve habitats, survey and monitor wildlife populations, provide education

and interpretive programs for forest users, and protect special habitats, such as snags and riparian areas.

Get Wild! is made up of 11 emphasis areas:

- *Eyes on Wildlife* for wildlife viewing and appreciation,
- *Partners in Flight* for neotropical migratory bird conservation,
- *Taking Wing* for waterfowl,
- *Making Tracks* for wild turkey,
- *Answer the Call* for quail,
- *Full Curl* for wild sheep,
- *A Million Bucks* for deer,
- *Dancers in the Forest* for grouse and woodcock,
- *Animal Inn*, an information and education program about wildlife dependent upon dead wood,
- *Elk Country* for elk habitat management,
- *Ecosystem Management/Restoration and Special Habitats* for unique species groups and communities.

In 1992, *Get Wild!* partners assisted in the completion of 939 Challenge Cost-Share projects.

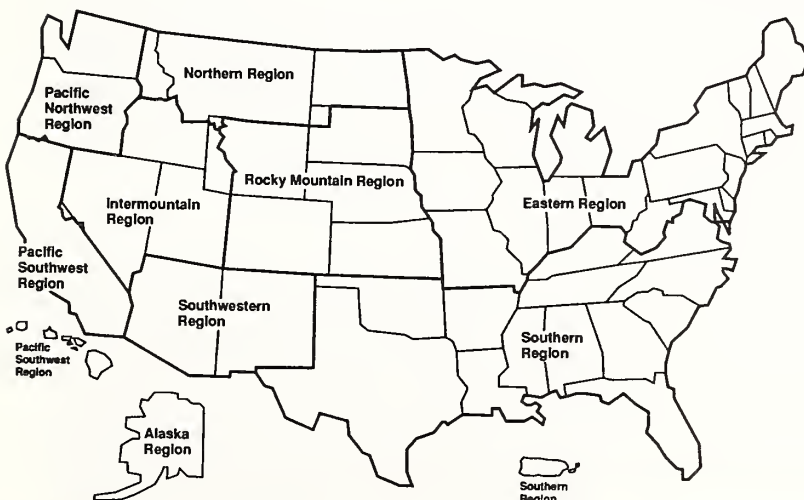

Although care for threatened, endangered, and sensitive species is emphasized in all Forest Service programs, it is within the *Every Species Counts!* program that rare species are profiled. National forests and grasslands provide homes to more than 240 threatened and endangered species. In addition,

more than 2,250 sensitive species, those for which special management is required to prevent the need for Federal listing, are found on these lands.

Initiated in 1990, the *Every Species Counts!* program brings together the resources and commitment of numerous Federal and State agencies, private organizations, and individuals to enhance species recovery and conservation. Successful implementation of the program involves conducting inventories and surveys to determine species occurrence, distribution, and population status; developing management guides for listed species; participating with the U.S. Fish and Wildlife Service in the preparation and implementation of recovery plans; and restoring and improving habitat. In 1992, 689 Challenge Cost-Share projects were completed for rare or imperiled species.

Rise to the Future!, *Get Wild!*, and *Every Species Counts!* have increased the interest and participation of numerous individuals and groups in habitat improvement projects for wildlife, fish, and rare plants. The names of our many participating partners are listed in appendix B. The Regional Project Highlights section of this report provides a snapshot of the variety and diversity of projects completed by the Forest Service and our conservation partners in 1992.

To our many partners, we extend our appreciation. Your commitment, contributions, and spirited volunteerism mean a brighter outlook for wildlife, fish, plants, and users of the national forests and grasslands.

The nine regions of the National Forest System.

REGIONAL PROJECT HIGHLIGHTS

This section of the report exemplifies the variety and breadth of the 2,111 Challenge Cost-Share projects completed in 1992 on national forests and grasslands.

NORTHERN REGION

From developing a region-wide habitat conservation assessment for the bull trout to monitoring the threatened prairie-fringed orchid on the Shenyenne National Grasslands and Custer National Forest, the Northern Region in partnership with numerous private, civic, State, and Federal groups, as well as individuals, completed 152 habitat improvement projects for wildlife, fish, and rare plants in 1992. Forest Service contributions totaling \$889,440 were more than matched by \$1,296,640 in partner contributions. Project accomplishments included 6,988 acres of habitat improvements and completion of 458 structures and 270,824 acres of inventories for wildlife, fish, and rare plants. In addition, 62 miles of streams were improved and 321 miles of streams were inventoried in the region. The following is just a sample of the myriad projects completed in the region in 1992.

Every Species Counts!

Beaverhead, Deerlodge, and Nez Perce National Forests. In cooperation with the Idaho Conservation Data Center and the Montana Natural Heritage Program, field surveys and monitoring studies of the Candystick were completed on the Forests. This sensitive plant species is directly influenced by timber harvesting; the surveys provided critical information needed to develop a species conservation strategy. Ten new occurrences were found as a result of this *Every Species Counts!* survey.

Bitterroot National Forest. The Liz Claiborne/Art Ortenberg Foundation, Patagonia Corporation, and The Peregrine Fund continued to support the Forest's successful peregrine falcon recovery program. Sixteen young peregrines have been hacked, with 15 surviving to dispersal age. Six males were placed at

Brian Mutch gets ready to place a peregrine falcon juvenile into a hack box on a cliff top in Canyon Creek, Bitterroot National Forest (MT). (Photo by USDA Forest Service)

a new hack site; four have been observed since dispersal in addition to a yearling female. Monitoring of returning peregrines and nesting success will continue through 1995.

Custer National Forest. North Dakota Parks and Recreation Department, North Dakota State University, and the Rocky Mountain Forest and Range Experiment Station continued monitoring and research on the threatened prairie-fringed orchid. Information obtained will be used to update the publication *Interim Management Guidelines for the Prairie-fringed Orchid* and to determine management needed to recover the orchid. This *Every Species Counts!* project will improve our understanding of the ecology of the orchid, including the effects of insect herbivory on orchid populations and pollination biology.

Get Wild!

Deerlodge National Forest. In cooperation with the Sheepshead Mountain Working Group, the forest completed an interpretive trail for the disabled in the Sheepshead Mountain Recreation Area. This environmental trail is the first of its type to be developed on National Forest System lands. The trail has several stations with audio capabilities that will allow

the visually impaired to participate in nature study, offering narratives, bird songs, and other wildlife activities. Wildlife appreciation will be greatly increased as a result of this *Eyes on Wildlife* project, and the opportunity for environmental education will be made equal for all publics. Approximately \$10,000 in labor and consultation was donated by the Sheepshead Mountain Working Group.

Idaho Panhandle National Forest. The Idaho Department of Fish and Game cooperated with the forest in a 4-year study of silvicultural practices and their effects on wintering deer in high snow depth areas. Information also was collected on mortality factors and seasonal movements in this *A Million Bucks* study. Results indicated a preference for western red cedar/western hemlock riparian cover in winter.

Kootenai National Forest. A decline in the big game forage base resulting from the 1910 wildfires in northwestern Montana is threatening the elk herd in the Bitterroot Mountains. A multi-year program to increase forage availability through prescribed burning has been implemented through a cooperative effort between the Rocky Mountain Elk Foundation and the Kootenai National Forest. Aerial ignition was used to burn 520 acres of young tree stands and decadent brushfields. Elk forage is expected to double on the treated habitat. The vegetative response to burning in this *Elk Country* project will be monitored annually along with the elk population itself.

Rise to the Future!

Bitterroot National Forest. Montana State University and the Intermountain Research Station entered into a joint research agreement to assess the needs and status of bull trout populations in the Bitterroot River basin. Habitat alteration had caused a significant reduction in the fluvial component of the bull trout population. This study provides information regarding the effect on resident salmonids of habitat fragmentation and loss. Study objectives are to test the hypothesis that conditions suitable for bull trout overwintering are rare in headwater areas and to estimate age composition, fecundity, population size, and survival rates on an annual basis.

Custer National Forest. Following listing of the chinook salmon as threatened under the Endangered Species Act, the National Marine Fisheries Service and the Forest Service completed a biological evaluation for spring/summer stocks of chinook salmon residing in the Selway River drainage.

Lewis and Clark National Forest. Fisheries personnel from the Montana Department of Fish, Wildlife and Parks cooperated with the Lewis and Clark National Forest on a project for Westslope cutthroat trout. Trout were collected from 15 streams to provide samples for genetic testing at Montana State University. Partial results have identified pure strains in three tributary streams in the South Fork of the Two Medicine River drainage of the Rocky Mountain Front. There were also pure strains from two streams in the Castle Mountains. The surveys in the Castle Mountains are being done in conjunction with a range analysis Environmental Impact Statement that covers the entire mountain range.

Nez Perce National Forest. A fully accessible walkway and streamside chinook salmon viewing and interpretive area were developed below the Red River chinook rearing facility on the Red River Ranger District. Several partners contributed to this project, including the U.S. Army Corps of Engineers (\$6,000), the Idaho Department of Fish and Game (\$2,000), the Kelly Creek Flycasters (\$4,400), and the Nez Perce National Forest (\$4,000). The project provides a thorough interpretation of chinook salmon life cycle and habitat requirements to forest visitors and permits viewing of salmon as they migrate upstream in preparation for spawning.

ROCKY MOUNTAIN REGION

Restoring riparian habitat, completing a draft recovery plan for the Uncompahgre fritillary butterfly, developing watchable wildlife brochures and other educational materials, and completing an accessible fishing pier and trail on the Routt National Forest are just a sample of the 181 projects completed by the Rocky Mountain Region and partners in 1992. Forest Service contributions totaling \$1,045,200 were boosted by \$1,114,000 in partner contributions. Project accomplishments included 79,793 acres of

habitat improvements and completion of 1,043 structures and 328,284 acres of inventories for wildlife, fish, and rare plants. In addition, 76 miles of stream habitat were improved and 238 miles of streams were inventoried. Highlights of the projects completed region-wide include the following:

Every Species Counts!

Nebraska National Forest. The Nebraska National Forest is serving as coordinator for black-footed ferret management and recovery. The forest, National Park Service, and U.S. Fish and Wildlife Service jointly prepared a draft Environmental Impact Statement on the black-footed ferret that evaluated the Badlands/Conata Basin as a potential release site. Other grasslands in the region were also surveyed for potential presence of ferrets.

Shoshone National Forest. The forest and partners focused on incorporating grizzly bear recovery objectives into plans for a major highway expansion,

expanding recreational facilities, oil and gas leasing proposals, timber sales, and hundreds of other actions. Partners in the program included the Greater Yellowstone Ecosystem, the Interagency Grizzly Bear Committee, and the Yellowstone Ecosystem Subcommittee. A Grizzly Bear "Center of Excellence" was established on the Shoshone National Forest in order to improve recovery efforts for grizzly bears while assuring other land management objectives are met.

Uncompahgre-Gunnison National Forest. The Bureau of Land Management (\$5,000), the Rocky Mountain Research Station (\$7,000), and the U.S. Fish and Wildlife Service (\$3,700), jointly funded a research project for the Uncompahgre fritillary butterfly. The Forest Service contributed \$8,000 to the project. A draft recovery plan for the butterfly was completed in 1992. Several specimens were found on one historically occupied site.

Nebraska National Forest and Wyoming Game and Fish Department biologists check the radio collar on a black-footed ferret. The first release of captive bred ferrets occurred last year in Shirley Basin, Wyoming. (Photo by LuRay Parker, Wyoming Game and Fish Department)

On the Shoshone National Forest, a Full Curl partnership is facilitating development of a public interpretive center where visitors can learn about bighorn sheep, their habitat, and their management. (Photo by USDA Forest Service)

Get Wild!

Nebraska National Forest. Unused funds totalling \$3,763 from a 1989 *Challenge-Cost Share* agreement between Ducks Unlimited and the Bessey Ranger District were used for *Taking Wing* projects in 1992. Improvements on the Lord Lake Wetland Complex consisted of tree removal along a quarter mile of shoreline and installation of fencing along the complex to create four exclosures. The construction will provide loafing, preening, and resting areas for waterfowl in addition to upland cover.

San Juan National Forest. In a *Making Tracks* partnership project, the Colorado Division of Wildlife and the San Juan National Forest installed 19 guzzlers, many of which had to be flown in by helicopter, on dry, inaccessible ridges. Water in these areas will increase the quantity of habitat available as well as the quality of habitat presently

used on a seasonal basis by wild turkeys. The guzzlers will be monitored for species-specific use and range expansion will take place in addition to determining if hunter use is increasing as a result of an increase in potential habitat.

Shoshone National Forest. A *Full Curl* partnership is facilitating design and construction of a National Bighorn Sheep Center in Dubois, Wyoming. This public interpretive center will highlight bighorn sheep habitat and management. Preliminary cost estimates total \$750,000. The Wyoming Game and Fish Department is contributing \$165,000 to the project; the town of Dubois, \$260,000; the Bureau of Land Management and Forest Service, \$220,000; the Department of Agriculture, Rural Development Grant, \$37,000; the Wyoming Economic Development and Stabilization Board, \$24,000; the Foundation for North American Wild Sheep, \$10,000; and the Forest Service Rural Development Grant, \$7,000.

White River National Forest. Matching funds of \$7,650 from the Rocky Mountain Elk Foundation were added to a \$7,740 contribution from the White River National Forest to complete prescribed burning of 979 acres on the Lost Creek Prescribed Burn Area and 179 acres on the Cattle Creek Prescribed Burn Area. Elk and mule deer are the target species in this effort to simulate wildfire as a natural and essential component of the shrub ecosystem. Anticipated results include more widely distributed elk and mule deer populations that will alleviate heavy use in concentration areas and regeneration of over-mature oakbrush and serviceberry stands.

Rise to the Future!

Arapaho and Roosevelt National Forests. A cooperative effort among the Colorado Division of Wildlife, Volunteers for Outdoor Colorado, and forests restored 2 miles of the Colorado River between the Shadow Mountain Reservoir and Lake Granby. More than 200 hours of heavy equipment work and 1,500 volunteer hours were involved in the completion of this *Rise to the Future!* project.

Black Hills National Forest. Installation of 408 fish structures in South Dakota and 7 in Wyoming was completed in 1992. In a collaborative project with

the South Dakota Department of Game, Fish, and Parks and the Wyoming Game and Fish Department, stream channels were deepened, lengthened, and narrowed. In addition, meanders were created, pool-riffle ratios were improved, in-stream cover was increased, and eroding banks were stabilized. The long-term goal of the project is to increase catchable wild trout by 50 to 100 percent, providing enhanced recreational activities for the public.

Routt National Forest. *A Rise to the Future!* partnership between the Bureau of Land Management and the Colorado Division of Wildlife resulted in the preparation of the *Conservation Plan for Colorado River Cutthroat Trout in Northwest Colorado*. Samples were also collected to test for genetic purity of trout species. In addition, preliminary habitat evaluations were conducted, immediate and potential risks to populations were identified, and existing or potential barriers to migration were located.

Shoshone National Forest. A heavily eroded, unvegetated streambank and access road of a dispersed campsite on the Clarks Fork River near Pilot Creek was rehabilitated as part of the Forest's *Rise to the Future!* program. The Bighorn Chapter of Trout Unlimited and the Wyoming Game and Fish Department contributed about \$925 to the project. The river bank was recontoured and the road was scarified to reduce soil compaction. Willow and cottonwood cuttings will be planted along with native grasses to minimize further erosion and the deposition of fine sediment in fish spawning and rearing habitat. Monitoring will take place annually until vegetation becomes fully established.

White River National Forest. The genetic purity of Colorado River cutthroat trout and its in-stream/riparian habitats were the subject of a *Rise to the Future!* project on the Rifle Ranger District. More than 50 streams were inventoried on the White River National Forest and adjacent Bureau of Land Management land. The information gathered will be used to preserve existing populations and identify projects that will help to restore pure Colorado River cutthroat to a portion of their historic range. The Colorado Division of Wildlife contributed \$17,000 in addition to equipment and personnel support. The Bureau of Land Management supplied an

electroshocker and the White River National Forest provided \$10,000, miscellaneous equipment and crew, and district support.

SOUTHWESTERN REGION

In the Southwestern Region, partners contributed funds, time, labor, and expertise toward the completion of 275 habitat improvement projects for species such as the northern leopard frog, narrow-headed garter snake, bald eagle, Gould's turkey, Apache trout, largemouth bass, and Rio Grande cutthroat trout. Forest Service contributions totaling \$1,023,050 were more than matched by \$1,176,630 in partner contributions. Project accomplishments included 17,853 acres of habitat improvements, and completion of 366 structures and 719,844 acres of inventories for wildlife, fish, and rare plants. In addition, 34 miles of streams were improved and 77 miles of streams were inventoried. Highlights of projects completed in the Southwestern Region include:

Every Species Counts!

Apache-Sitgreaves National Forests. A study of rare snakes and frogs was undertaken with the Arizona Game and Fish Department. More than 70 aquatic sites were surveyed for the presence of rare snakes and frogs to provide baseline data for future monitoring. New locations of Chiricahua frogs, northern leopard frogs, and narrow-headed garter snakes were documented across the forests. The Arizona Game and Fish Department matched the Forest Service contribution of \$5,000.

Coconino National Forest. As a part of the National Wildlife Federation's Midwinter Bald Eagle Survey, nighttime roosts of bald eagles were monitored in 1992. Nearly one-quarter of Arizona's bald eagle population—43 raptors—was counted by community volunteers. The survey will have several benefits, including increases in site-specific information on eagle locations, community involvement in rare species management, and communication and partnerships with the public. This project will also provide the community with a greater sense of ownership in management of their natural resources.

Get Wild!

Apache-Sitgreaves National Forests. The Arizona Game and Fish Department contributed \$24,000 to a *Taking Wing* project to improve waterfowl nesting habitat. In an effort to reduce damage to nesting cover from grazing livestock, four wetlands were surrounded by about 2 miles of new fencing that includes walk-through gates and elk jumps. Hay Lake, Pat Sink, Pool Corral Lake, and Basin Lake were also protected by the construction of an earthen pit tank for livestock watering.

Carson National Forest. Rocky Mountain elk was the target species for a 1,500-acre prescribed burn. The New Mexico Department of Game and Fish provided \$5,000 and personnel for this *Elk Country* project, while the forest contributed \$18,000. The area treated was in the Valle Vidal Unit for the Questa Ranger District. The area is used heavily by elk and some deer throughout the summer and in transition periods for spring and fall range. The burn will help to maintain the health of grass and forb stands by removing unpalatable vegetation and maintaining vigor in the plants. The resulting forage base will help support the resident elk herds in the Valle Vidal Unit.

Cibola National Forest. The national *Eyes on Wildlife* award was given to the Cibola National Forest for its cooperative project with Hawkwatch International to build a viewing site. From the viewing site, visitors can see raptors as they migrate past the observation area each fall. Volunteers document species, sex, and numbers of birds. Another site on the Sandia Ranger District provides similar viewing opportunities during the spring migration. Hawkwatch International contributed \$14,300 and the forest \$7,425 to this *Eyes on Wildlife* project.

Coconino National Forest. A statewide workshop was held to inform Federal, State, and private individuals and groups about the *Animal Inn* program. More than 30 people were in attendance, including a number of teachers from several Arizona communities. The Arizona Game and Fish Department, the New Mexico Department of Game and Fish, and the Northern Arizona Audubon matched the forest's

\$900 contribution to carryout this awareness workshop.

Coronado National Forest. A wild turkey management habitat assessment is being conducted with New Mexico State University. Radio-collared Gould's turkeys will be tracked, and the results will be incorporated into a comprehensive habitat management plan for the species. This culmination of 10 years of research was funded by both the university and the forest, each contributing \$11,200 to the project.

Rise to the Future!

Apache-Sitgreaves National Forests. More than 100 volunteers provided food, labor, and money to help build 38 fish structures on the West Fork of the Black River, Thompson Creek, and Burro Creek on the Springerville Ranger District. Several partners provided matching funds of \$6,000 and labor for this *Rise to the Future!* project. The partners included the Arizona Boys Club, the Arizona Fly Casters (Phoenix), the Arizona Game and Fish Department, the Desert Fly Casters (Phoenix), the Northern Arizona Fly Casters (Flagstaff), the Tucson Fly Fishing Club, and the Tucson Old Pueblo Chapter of Trout Unlimited. The project was implemented to stabilize eroding streambanks, provide hiding cover and pools for fish, and eventually allow for the recovery of native Apache trout. Log and rock structures emplaced will stabilize eroding streambanks while structures known as "willow cribs" will stop bank cutting as well as provide fish cover under overhanging willows.

INTERMOUNTAIN REGION

The Intermountain Region participated in 184 Challenge Cost-Share projects to improve wildlife, fish, and rare plant habitats in 1992. Projects covered a wide range of species and their habitats, including efforts to determine wolverine habitat use on the Boise, Challis, and Sawtooth National Forests; release peregrine falcons on the Salmon National Forest; install watering devices for wild sheep and other species on the Challis National Forest, and complete two fully accessible fishing piers on the

Targhee National Forest. Forest Service contributions totaling \$1,150,480 were boosted by \$1,397,740 in partner contributions. Project accomplishments included 8,826 acres of habitat improvements and completion of 228 structures and 2.2 million acres of inventories for wildlife, fish, and rare plants. In addition, 70 miles of streams were improved and 336 miles of streams were inventoried. Examples of *Challenge Cost-Share* projects are highlighted below.

Every Species Counts!

Ashley National Forest. A survey for Ute ladies tresses, a threatened plant, involved the U.S. Fish and Wildlife Service and the Utah Natural Heritage Program; \$3,000 was contributed from each organization. New populations were discovered and counted on Bureau of Land Management, forest, private, State, and Ute Tribal lands. Some of the newly discovered populations were comparatively large, and monitoring studies initiated in this project will provide baseline data required for future management of the species.

Challis National Forest. A continuing partnership with the Idaho Department of Fish and Game, The Peregrine Fund, and the U.S. Fish and Wildlife Service resulted in hacking five peregrine falcons from the Wildhorse Lookout in the White Knob Mountains near MacKay, Idaho. Contributions from partners totalled nearly \$11,000, while the Forest funded about \$2,000 for the project.

Humboldt National Forest. Nongame species specialist Mark Ports and his wife, Lois, entered into an agreement with the forest to conduct surveys for selected Intermountain Region sensitive species. The Mountain City and Ruby Mountains Ranger Districts were the sites of the surveys for the spotted bat, spotted frog, western big-eared bat, and many other species. In addition, spotted frogs were surveyed in 10 watersheds. The Ports' contributions were estimated at \$1,700, while the forest contributed \$700.

Get Wild!

Bridger-Teton National Forest. The Rocky Mountain Elk Foundation, the Wyoming Game and Fish Department, and the Buffalo Ranger District of the Bridger-Teton National Forest worked together to improve more than 1,500 acres of elk and moose winter range. Vegetation treatments, including aspen cutting and burning of sagebrush, willow, and aspen, have significantly boosted forage production. Monitoring of the Burro Hill burn site, where an additional 100 acres of sagebrush was burned to improve elk winter range, will help determine the effectiveness of the treatments. The \$3,000 cost of the burn was split between the Wyoming Game and Fish Department and the forest. An additional \$2,700 was provided by the Rocky Mountain Elk Foundation for monitoring Burro Hill and other sites.

Challis National Forest. An *Eyes on Wildlife* project involving the Idaho Department of Fish and Game took place at Marsh Creek. An interpretive sign which described the wild fish of the Middle Fork Salmon River was placed alongside the creek. The sign details the rigors encountered before the fish reach the spawning areas at Marsh Creek. The Idaho Department of Fish and Game and the forest both contributed \$5,000.

Humboldt National Forest. The Nevada Department of Wildlife—\$60,000, the Rocky Mountain Elk Foundation—\$60,000, and the National Fish and Wildlife Foundation—\$26,600, contributed to an *Ecosystem Management/Restoration and Special Habitats* project within the Bruneau River Watershed. Baseline data was collected to assess habitat potential and conditions. The resulting data set will be used to evaluate the effectiveness of current management and assess management strategies needed to enhance riparian and upland conditions. The data will be used to analyze potential sites for elk reintroduction, fisheries improvements, and a variety of other wildlife objectives.

Rise to the Future!

Humboldt National Forest. An All-American Fishing Derby featuring a fishing and casting competition was held for more than 60 children at Angel

Lake. Co-sponsors with the Ruby Mountain Ranger District included the Nevada Department of Wildlife, Nevada Division of Forestry, Nevada State Highway Patrol, the Northeastern Nevada Chapter of Trout Unlimited, and the Ruby Lake National Wildlife Refuge. A free lunch for participants was provided by local sponsors.

Sawtooth National Forest. As part of a *Rise to the Future!* project with the Idaho Department of Fish and Game, 8-Mile Creek had twenty pool structures built. The only known stream on the southern half of the Sawtooth National Forest to contain pure-strain Yellowstone cutthroat trout, the creek will become better suited as trout habitat, providing protective cover and holding areas for both migrating adult and juvenile salmon and steelhead.

Targhee National Forest. Two barrier-free fishing piers were completed on the Targhee National Forest. In addition, boulder structures to draw fish near the piers were emplaced. This *Rise to the Future!* project will promote fishing, enhance trout resources, and encourage partnerships in habitat restoration. The Henry's Fork Foundation, Island Park Sportsmen Association, and the Upper Snake River Fly Fishers donated more than 25 days of labor and all the material for the piers, a \$20,000 contribution in total.

PACIFIC SOUTHWEST REGION

Hundreds of partners, from individual citizens to government agencies and conservation groups, teamed up with forests in the Pacific Southwest Region to make significant improvements to wildlife, fish, and rare plant habitats. The 303 Challenge Cost-Share projects completed region-wide included installation of bat gates at old mines that provide roosting habitat for rare Townsend's big-eared bats on the Sequoia National Forest and improvement to anadromous fish habitat on the Lassen National Forest. Partner contributions totaling \$2,674,340 and Forest Service contributions of \$2,158,370 supported 23,057 acres of habitat improvements and completion of 186 structures and nearly 1.8 million acres of inventories for wildlife, fish, and rare plants. In addition, 165 miles of stream improvements and inventories of 96 miles of streams were completed.

Regional examples of accomplishments through partnerships are highlighted below.

Every Species Counts!

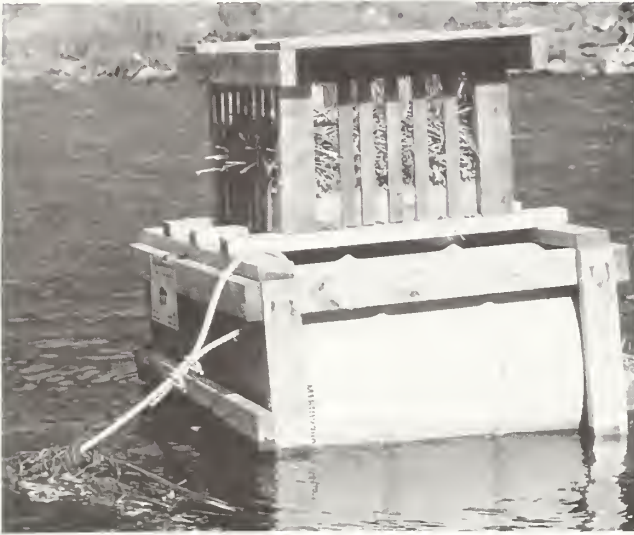

Sequoia National Forest. The Pacific Gas and Electric Company and Sierra Forest Products were partners in a tri-forest peregrine falcon monitoring program. The Inyo and Los Padres National Forests were surveyed with the Sequoia National Forest in the eight-million acre review. In addition, 10 peregrine falcons were successfully banded as part of the Sequoia-supervised band program on the Sierra National Forest. Sequoia personnel also investigated a potential nesting site on the Sequoia Kings-Canyon National Park.

Shasta-Trinity National Forest. Nearly 30 percent of the California breeding bald eagle population—32 active nesting territories—is on the Shasta-Trinity National Forest. A joint Bureau of Reclamation, Humboldt State University, and U.S. Fish and Wildlife Service project was implemented to determine the effect of water drawdown on eagle behavior patterns. This study researched bald eagle foraging, feeding, reproduction, and other behaviors. Efforts were made to minimize disturbance to nesting eagles. The forest relied heavily on both television and newspaper media to increase public awareness of bald eagles. In addition, 48,000 acres were monitored and inventoried for bald eagles.

Six Rivers National Forest. A cooperative project among the Pacific Southwest Region, Redwood Sciences Laboratory in Arcata, and the Six Rivers National Forest features a survey of the Pacific fisher and the American marten in the proposed Pilot Creek timber sale area. The study documents occurrences of fisher and will be followed up by a telemetry study which will serve as the basis for a future study to monitor the effects of timber harvest on fisher and marten populations.

Get Wild!

Eldorado National Forest. Volunteers collected floristic data to assist in the creation of interpretive trails in the Jenkinson Lake, Caples Creek, Lover's

At China Point on the Klamath National Forest (CA), goose nest boxes were constructed and anchored to provide nesting sites. (Photo by K. Nickell, USDA Forest Service)

Leap and Horsetail Falls areas of the Eldorado National Forest. The information will be used to create interpretive trails and for talks and brochures to educate the public on the flora in the area, including sensitive plants. It will also educate the public on native plants and habitats and how they can become involved in protecting and enhancing these species and areas. Partners, including Elaine Chaisse, the Eldorado Irrigation District, and Greg McGahan provided \$1,143 in project costs. The forest provided \$200 for this wildlife viewing project.

Klamath National Forest. The California Department of Fish and Game and the Oregon Department of Fish and Wildlife cooperatively continued an elk reintroduction program on the Salmon River Ranger District. The transplanted elk came from the Jewell Meadows State Wildlife Refuge outside of Portland. Some of the cows were outfitted with radio collars and all were fitted with ear tags. It is expected that the reintroduced population will soon show an increase that will support hunting. Funding was provided by the California and Oregon Departments—\$5,000 and \$1,000, respectively—and the District—\$3,000.

Sequoia National Forest. A thinning project in black oak stands to increase mast production, growth of herbaceous plants, and development of cover was part of a quail habitat management project on the Hume Lake District. Two acres were thinned and 15 brush piles were erected for cover. One water development was also installed. Several groups contributed to this project, including the California Sportsmen's Coalition—\$200, the Fresno County Sportsmen's Club—\$600, the Fresno County Wildlife Recreation Commission—\$200, the Fresno County Sportsmen's Coalition—\$100, and Quail Unlimited—\$800. The Forest contributed \$175 in labor.

Sierra National Forest. The California Department of Fish and Game participated in a deer habitat management project with the Sierra National Forest on the Pine Ridge District. The meadow and riparian enhancement involved the creation of a natural cattle access barrier from felled trees that will provide improved vegetative diversity and increased forage for deer and other wildlife. Hill Bill cooperative funds provided \$2,000, while the Forest provided \$1,000.

Rise to the Future!

Klamath National Forest. A cooperative *Rise to the Future!* project—designed to educate local citizens and resource users while involving them in restoration activity—the *Plant a Tree for Salmon*, took place on the Salmon Ranger District of the Klamath National Forest. Forty-five volunteers from the Boy Scouts of America, the Croman Corporation, the Girl Scouts of America, the Karuk Tribe of California, the Klamath Forest Alliance, and the Salmon River Concerned Citizens participated in the riparian planting project, contributing nearly \$5,000. Over 30 acres of riparian area were planted with conifer and native hardwood seedlings. The resulting healthy riparian vegetation is expected to provide thermal regulation of water temperature during critical summer and winter spawning periods. The forest contributed \$17,000 to the project.

San Bernardino National Forest. The Cajon Wash Restoration Project supported protection and restora-

tion of 6 miles of stream and riparian habitat in the Cajon Pass area. The Cajon Pass area is a vital wildlife resource in an otherwise arid environment and, along with its tributaries, functions as an important wildlife corridor, facilitating the movement of animals and plants between the San Gabriel and San Bernardino Mountains. The Cajon Pass area is also a major transportation and utility corridor. The first phase of the project was the installation of cable fences and gates along 4 miles of stream to exclude off-highway vehicles. Partners for this *Rise to the Future!* project include the California Conservation Corps, the California Department of Fish & Game, the Izaak Walton League, and Quail Unlimited.

Shasta Trinity National Forest. A joint *Rise to the Future!* project between the Trinity River Restoration Program and the Shasta Trinity National Forest surveyed 70 miles of stream within the Big Bar Ranger District. The snorkel survey was conducted on three streams, the New River, the North Fork Trinity River, and Canyon Creek. The restoration program expended \$48,580 and the forest \$36,000 to determine the abundance of adult summer steelhead and spring-run chinook. Survey information will be used to make management decisions concerning the limited steelhead and chinook stocks.

PACIFIC NORTHWEST REGION

In 1992, the Pacific Northwest Region participated in 234 Challenge Cost-Share projects to improve wildlife, fish, and rare plant habitats. Projects covered a wide range of species and their habitats, including efforts to restore the redband trout on the Ochoco National Forest, survey and monitor bald eagles of the Winema National Forest, develop the *Animal Inn* program on the Deschutes National Forest, and complete a variety of activities and educational materials on the Mt. Baker-Snoqualmie National Forest in recognition of "Celebrating Wildflowers" week. Forest Service contributions totaling \$1,476,800 were more than matched by \$2,061,900 in partner contributions. Project accomplishments included 11,824 acres of habitat improvements and completion of 546 structures and 627,876 acres of inventories. In addition, 24 miles of stream habitat were improved and 472 miles of streams were

inventoried. What follows is just a taste of the many projects completed region-wide.

Every Species Counts!

Gifford Pinchot National Forest. Nearly 30 volunteers contributed over 650 hours to an *Every Species Counts!* program that involved the Berry Botanic Garden, the Garden Club of America, and the Pacific Crest Outward Bound School. Nine populations of the sensitive fringed pinesap were monitored throughout the forest as part of a long-term plan to track population trends. Ecological monitoring plots were established and data were collected in the T. T. Munger Research Natural Area, 500 acres were surveyed for sensitive plants, and work was initiated on two botanical interpretive brochures. The Garden Club of America contributed \$4,000 and the forest expended \$1,200 for the program.

Malheur National Forest. The Oregon Department of Agriculture has joined the forest in an a study of the biology of *Luina serpentina*, a Category 1 plant species. More than 95 percent of this species occurs on National Forest System lands, and it is endemic to the west portion of the Malheur National Forest. The study focused on evaluating pollination vectors, seed set, sexual versus asexual reproduction, and factors limiting seedling establishment. The information

MacFarlane's four o'clock, an endangered plant species, is primarily found in the Pacific Northwest Region. (Photo by USDA Forest Service)

will aid in developing and implementing a conservation strategy for the species. Both the Oregon Department of Agriculture and the Malheur National Forest contributed \$6,200 to this *Every Species Counts!* project.

Mt. Hood National Forest. An interpretation project on peregrine falcon hacking programs was developed on the Zig Zag Ranger District. Cooperatively funded by the Ski Bowl ski area and the Mt. Hood National Forest for \$5,000, the *Every Species Counts!* project encourages hikers to respect a spur trail closure that minimizes disturbance to young peregrines. In addition, signs explaining the program were posted, highlighting the various raptor species that use the area and explaining hacking procedures. The feedback on the quality of the information and the materials has been overwhelmingly positive.

Wallowa-Whitman National Forest. An *Every Species Counts!* plant survey of 2,000 acres of Nez Perce Tribal lands was conducted by the Idaho Department of Fish and Game and the Wallowa-Whitman National Forest. Each partner contributed \$5,000 to the MacFarlane's four-o'clock survey. Six other rare plant species were also surveyed. A map was completed showing survey routes of plant populations.

Get Wild!

Colville National Forest. The Rocky Mountain Elk Foundation made a matching contribution of \$4,500 with the Colville National Forest for an elk habitat management project in the Colville Ranger District. Two areas of forested winter range, totaling 351 acres, were improved by underburning to reduce forest litter and rejuvenate the availability, palatability, and nutritional content of browse plants, such as ceanothus, snowberry, and ocean spray. Initial surveys indicated that the fires created the desired mosaic of burned and unburned areas, with a steady progression of preferred browse species regrowth.

Fremont National Forest. A bitterbrush planting on the Silver Lake Ranger District was implemented by the forest in partnership with the Oregon Department of Fish and Wildlife, the Oregon Hunter's Association, and the Weyerhaeuser Company. Thirty

thousand seedlings were planted on 100 acres as part of a deer habitat management project intended to increase mule deer forage on the Fort Rock Mule Deer Herd winter range. The \$22,200 project was funded by the Fremont National Forest—\$8,300 and partners—\$13,900.

Gifford Pinchot National Forest. The Rocky Mountain Elk Foundation, the Vancouver Wildlife League, and Washington Department of Wildlife collectively contributed \$20,000 to a wildlife viewing project in partnership with the Gifford Pinchot National Forest, which contributed \$15,000. On the Lone Butte area, noted for its wide diversity of wildlife and wildlife-recreation opportunities, 10 acres of meadow were enhanced, elk wallows were restored, 5 miles of road were closed, 10 songbird nest boxes were installed, and 10 interpretive signs were constructed. These efforts will reduce motorized vehicle-associated harassment and enhance key habitats. Additionally, recreationists will benefit from the increased hiking/bicycling opportunities and improved wildlife viewing.

Ochoco National Forest. A quail habitat management project involving the Oregon Hunter's Association and the Oregon Department of Fish and Wildlife was completed on the Crooked River National Grasslands and the Prineville Ranger District. Forty-seven wildlife guzzlers in need of maintenance were revitalized in areas where water resources were limited. The guzzlers will be available for a wide variety of wildlife species, although California quail and Hungarian partridge were two of the target species. More than 30,000 acres of habitat were enhanced, improving water availability in areas normally devoid of water in the summer. The total cost of the project was \$31,000; \$13,000 was contributed by the Ochoco National Forest, \$12,000 by the Oregon Department of Fish and Wildlife, and \$6,000 by the Oregon Hunter's Association.

Rise to the Future!

Okanogan National Forest. Harassment and illegal harvest of spawning spring chinook salmon near camp sites along tributaries of the Methow River spurred a partnership among the Washington Depart-

ment of Fisheries, the Yakima Indian Nation, and the forest. Two hundred interpretive signs near the camp sites described the life history of salmon, emphasized the need not to disturb spawning fish, and detailed law enforcement information. The cost of this \$2,000 *Rise to the Future!* project was evenly split among partners. It is anticipated that the signs will provide information to over 25,000 Forest visitors.

Wenatchee National Forest. Central Washington University and the forest entered into an agreement to monitor juvenile populations of bull trout and to determine habitat conditions, population status, and trends. Objectives of this *Rise to the Future!* project included the identification and quantification of bull trout use by age/size class, the determination of rearing densities by age/size class and habitat type, and the identification and quantification of habitat use by spawning trout and estimated redd density. Central Washington University contributed \$18,500 to the project and the Wenatchee National Forest \$20,000.

Willamette National Forest. A project was initiated to provide passage to Sweetwater Creek from Trail Bridge Reservoir for bull trout. A custom culvert excludes brook trout from upstream passage into the creek while allowing for re-establishment of bull trout. Partners for this *Rise to the Future!* project include the Eugene Water and Electric Board, the Oregon Council of the Fly Fishing Federation, the Oregon Department of Fish and Wildlife, and the Oregon Department of Transportation. In addition, volunteer SCUBA divers from local clubs helped conduct surveys. The partners are developing an interpretive sign of bull trout habitat and life history for visitors, while the Oregon Department of Fish and Wildlife is seeding the creek with spawners and eggs. Project contributions are many, including the Eugene Water and Electric Board, \$15,375; Oregon Council of the Fly Fishing Federation, \$4,800; Oregon Department of Fish and Wildlife, \$17,375; and Oregon Department of Transportation, \$16,250.

SOUTHERN REGION

The Southern Region in cooperation with hundreds of partners completed 520 habitat improvement

projects for wildlife, fish, and rare plants. Forest Service contributions totaling \$1,888,310 were augmented by \$2,817,350 in partner contributions. Project accomplishments included improvement of 18,057 acres of habitat and completion of 2,096 structures and 1,186,248 acres of inventories. In addition, improvements were completed on 113 miles of streams, while 392 miles of streams were inventoried. Following are highlights of projects completed region-wide in 1992.

Every Species Counts!

Daniel Boone National Forest. A unique partnership with the Kentucky Department of Fish and Wildlife Resources, the Kentucky Nature Preserves Commission, Morehead State University, and The Nature Conservancy supported a population inventory on the Morehead Ranger District. The inventory led to the discovery of 17 new animal and plant species on the 110,820-acre Morehead Ranger District.

Francis Marion and Sumter National Forests. Techniques developed in cooperation with North Carolina State University and the Southeastern Forest Experimental Station have affected the remarkable recovery of the red-cockaded woodpecker. In the third season since the devastation of Hurricane Hugo, the number of adult birds has grown from 579 to 1,250—an increase of 45 percent. Most of the success of this program can be attributed to the aggressive installation of artificial cavities in suitable trees. It is anticipated that similar dramatic increases will occur in other post-Hugo red-cockaded woodpecker populations once the same approach is applied.

George Washington National Forest. In partnership with the U.S. Fish and Wildlife Service, the George Washington National Forest initiated an effort to implement a conservation strategy and pre-listing recovery plan for the Cow Knob salamander. In addition, a detailed conservation plan was prepared for this species. Over 95 percent of the global range of this rare species occurs on Forest Service-administered land along the crest of the Shenandoah Mountains on the Dry River Ranger District.

Get Wild!

Croatan National Forest. Through a *Taking Wing* project with Ducks Unlimited and the North Carolina Wildlife Resources Commission, renovation of the Catfish Lake Waterfowl Impoundment continues. In 1992, additional plantings of waterfowl-preferred foods, the construction of large water management canals and two gates limiting access to foot travel, as well as the leveling of the impoundment floor for better water management were completed. A key feeding and resting habitat in the North Carolina area of the Atlantic flyway, the impoundment will benefit black bear, eastern wild turkey, fisheries, and watchable wildlife activities in addition to waterfowl.

Francis Marion and Sumter National Forests. The South Carolina Waterfowl Association and the forests are cooperating on a wood duck nesting habitat program. This *Taking Wing* program has resulted in increases in wood duck production to approximately 5,000 per year. More than 1,130 nestboxes have been installed, and each are cooperatively maintained and monitored on an annual basis.

Ouachita National Forest. In partnership with the Boy Scouts of America, Girl Scouts of America, and Quail Unlimited, the Coldsprings Ranger District planted trees and shrubs on 160 acres to improve

quail and deer habitat. Trees were acquired from the Arkansas Forestry Commission and planted by local scout troops. Quail Unlimited and the forest each contributed \$3,500 toward completion of this project.

Rise to the Future!

Ouachita National Forest. The Forest, in cooperation with the National Fish and Wildlife Foundation, Arkansas Game and Fish Commission, City of Fort Smith Arkansas, Southwest Texas State University, Oklahoma Department of Wildlife Conservation, and U.S. Fish and Wildlife Service initiated a multi-year project to restore habitat of and reintroduce the longnose darter, a rare fish. Partners contributed \$30,000 toward this restoration effort, while the forest contributed \$7,000.

Cherokee National Forest. An agreement with the Tennessee Council of Trout Unlimited facilitated electrofishing and significant monetary savings for the Cherokee National Forest. Access to 500 miles of stream, presumed to be capable of supporting trout, was difficult; dense growth made for poor working conditions for electrofishing crews. Trout Unlimited anglers were given a list of streams with no available data and asked to fly fish them in order to identify streams containing trout and other species. Results from the new data allowed electrofishing crews to verify populations and document subspecies. This *Rise to the Future!* project proved to be quite economical, as fly fishing days valued at \$100 per 10 streams provided a return of \$1,000 in Challenge-Cost Share funds for high-priority stream electrofishing.

Ocala National Forest. A *Rise to the Future!* publication describing the location and characteristics of the principle water bodies of the Ocala National Forest was prepared in cooperation with the Ocala National Forest Interpretive Association. Created to provide anglers with sufficient information to locate and access many of the hard-to-find fishing opportunities of the forest, the 112-page document has information on recreational facilities, sport fish characteristics, and topographic maps of 43 water bodies, in addition to other useful data.

Cooperative efforts help to re-establish fish populations on the Caddo Ranger District (TX). (Photo by USDA Forest Service)

EASTERN REGION

In the Eastern Region, partners contributed funds, labor, technical assistance, and enthusiasm toward the completion of 206 habitat improvement projects for species such as Mead's milkweed, white-tailed deer, bald eagle, Atlantic salmon, wild turkey, and Virginia big-eared bats. Forest Service contributions of \$1,329,550 were more than matched by \$1,922,500 in partner contributions. Project accomplishments included 14,610 acres of habitat improvements and completion of 1,232 structures and 277,455 acres of inventories for wildlife, fish, and rare plants. In addition, 151 miles of streams were improved and 109 miles of streams were inventoried. Highlights of projects completed in the Eastern Region include:

Every Species Counts!

Chequamegon National Forest. In cooperation with the Wisconsin Department of Natural Resources, two osprey nesting platforms were installed on the Chequamegon Waters Flowage on the Medford Ranger District. An osprey nest platform was also installed on an island in Day Lake. A nesting pair of ospreys is expected within 3 years. The district provided personnel to assist with platform location and installation, while the Wisconsin Department of Natural Resources supplied materials and labor. Total contributions were \$1,400, \$900 of which came from the Wisconsin Department of Natural Resources.

Hiawatha National Forest. An *Every Species Counts!* survey of the insect fauna inhabiting Scott's Marsh was co-sponsored by Northern Michigan University. Biology professor Donald A. Snitgen collected and identified species occurring in a northern patterned fen. In addition, several rare species were identified and short- and long-term impacts of burning on marsh insects were determined. The forest and the Northern Michigan University jointly funded the survey, contributing \$7,620 and \$7,250, respectively.

Monongahela National Forest. An agreement with the American Cave Conservation Association, the West Virginia Division of Natural Resources Endangered Species Section, and the U.S. Fish and Wildlife Service is providing a measure of safety for the Virginia big-eared bat. Cave Mountain Cave is a closed cave on the Potomac Ranger District and serves as critical habitat for over 800 female Virginia big-eared bats and 300 bats of four other species. The cave is a maternity site in the summer months and a hibernation site during the winter months. Illegal human entry into the cave had been disturbing nursing females and leading to the deaths of their young. This *Every Species Counts!* project involved replacing the "old style rebar" cave gates with "new style angle iron" gates, thus minimizing disturbance to Virginia big-eared bats from humans.

Shawnee National Forest. The Morton Arboretum and the Shawnee National Forest engaged in a genetic study of the Mead's milkweed. Study results

will help identify suitable sites for re-establishing this rare plant. The Morton Arboretum provided \$8,100 in funds for this *Every Species Counts!* study; the Forest provided \$21,000.

Get Wild!

Chequamegon National Forest. A Waterfowl Habitat Management cooperative between the Wisconsin Conservation Corps and the Chequamegon National Forest took place on the Medford Ranger District. Sixty wood duck and squirrel nestboxes were constructed and installed on the district to enhance existing populations. Labor was provided by the corps at a cost of \$2,200, and materials were provided by the forest at a cost of \$2,000.

Hiawatha National Forest. A deer study was initiated on the Hiawatha National Forest in cooperation with the Michigan Department of Natural Resources, Michigan State University (MSU), and UP Whitetails of Delta County. MSU contributed \$35,000 and \$15,000 was contributed by UP Whitetails. The relationships among timber harvest areas, forest regeneration and deer densities, migration patterns, and daily movements were investigated; additionally, 47 deer were radio-collared and 200 were tagged to determine migration pattern and variable-season mortality rates, as well as for summer and winter yarding studies.

Nicolet National Forest. In cooperation with the Great Lakes Indian Fish and Wildlife Commission, the forest studied the interactions and habitat preferences of upland furbearers on a 120,000-acre study area. Telemetry data will be stored in the forest's Geographic Information System. Movements of each furbearer species will be analyzed to determine seasonal habitat preferences. The Great Lakes Indian Fish and Wildlife Commission contributed \$26,000 toward this study, while the Nicolet National Forest contributed \$10,000.

Shawnee National Forest. A quail and wild turkey habitat management project involved monitoring of a prescribed burn on the Elizabethtown Ranger District. Warm season grasses were thinned out, allow-

ing forbs to come up prior to the growing season for the grasses. Noticeable responses included an increase in herbaceous ground cover diversity due to the removal of immediate overstory, including brush species such as autumn olive and Japanese honeysuckle. Turkey have been seen and their signs observed and the number of bobwhite quail heard and observed has increased. Quail Unlimited and the Shawnee National Forest equally contributed \$3,544 to the project.

Rise to the Future!

Allegheny National Forest. Two *Rise to the Future!* projects were completed with the Kinzua Fish and Wildlife Association. In the spring and the fall, 300 tire reefs were installed. The structures provide cover for game fish, particularly walleye. In winter, Christmas tree structures were installed within easy access by bank anglers. Wired together and anchored, the 15 structures attract more fish, specifically panfish like crappies and yellow perch, to the shore. The forest spent \$1,000 and the Kinzua Fish and Wildlife Association \$3,000 on these projects.

Huron-Manistee National Forest. Fourteen partners joined the Huron-Manistee National Forest for 15 *Rise to the Future!* projects. Partner contributions to the fisheries projects totaled over \$162,000. The Au Sable, Little Manistee, Manistee, North Branch White, and Pere Marquette Rivers benefited from several habitat restoration projects that focused on reducing sand bedload levels in streams through streambank stabilization in order to restore spawning and rearing habitat. Partners included the Manistee County Road Commission, Mason-Lake Soil Conservation District, Michigan Department of Natural Resources, Michigan Wildlife Habitat Foundation, and the Pere Marquette Watershed Council.

Mark Twain National Forest. The forest continued its Spring Creek restoration project in cooperation with the Federation of Flyfishers, the Missouri Department of Conservation, and Trout Unlimited. The Federation of Flyfishers provided \$4,000 to the project in addition to volunteers who participated in a stream habitat survey. The funding aided a geomorphology study to determine steps necessary for

restoration. Volunteer personnel helped provide an alternate parking area to prevent overuse from traffic, planted grass and trees, and completed a sign acknowledging partnership contributions. The forest contributed \$6,000 to this *Rise to the Future!* project.

White Mountain National Forest. Fryeburg Academy students and Saco Valley Anglers (Trout Unlimited) worked with the Saco Ranger District on a continuing *Rise to the Future!* activity, the Slippery Brook Watershed Stabilization Project. Improvements were made on 150 feet of stream, such as revegetation of native grasses and willows and placement of stream channel log deflectors and streambank rock. In addition, brook trout habitat was improved with the placement of cover logs and one "lunker" structure to provide hiding cover and winter refuge for juvenile and adult trout.

ALASKA REGION

Surveys for spotted frogs and marbled murrelets on the Tongass National Forest and a variety of exciting *National Fishing Week* activities on the Chugach National Forest are just a sample of the myriad projects completed in the Alaska Region in 1992. Forest Service contributions totaling \$551,200 were matched by \$712,200 in partner contributions. Project accomplishments included completion of 2,640 acres of habitat improvements and 1,427,680 acres of habitat inventories. In addition, habitat improvements were completed on 10 acres of stream habitat. Highlights of the 56 projects completed statewide include the following:

Every Species Counts!

Tongass National Forest. The spotted frog was the subject of a herpetological survey conducted on the Stikine Area as part of the *Every Species Counts!* program. The U.S. Fish and Wildlife Service contributed more than \$9,000 to the study. Fifty thousand acres were surveyed throughout the Stikine Area, with smaller acreages surveyed on the Ketchikan District.

Tongass National Forest. An inventory of woodland raptor species, including goshawks, peregrine

falcons, and owls, was conducted on the Stikine Area of the Tongass National Forest. Focussing on locating goshawk nesting territories in proposed timber sale areas, the inventory tested the utility of the Alaska Region's goshawk inventory protocol. In addition, owl surveys on Wrangell and Mitkof Islands were completed. Eighty-five owl nest boxes were monitored for occupancy in the area. Partners in this *Every Species Counts!* project were the Alaska Department of Fish and Game and the Pacific Northwest Forestry Experiment Station.

Tongass National Forest. The Chatham Area of the Yakutat Ranger District had the highest trumpeter swan counts ever recorded. There were 245 swans wintering on the district and 14 nesting pairs in June. By August, 9 pairs fledged 32 young. The U.S. Fish and Wildlife Service was the partner in this *Every Species Counts!* project, collecting data for inclusion in the *Alaska Swans, Geese and Brant Productivity Surveys* report.

Get Wild!

Tongass National Forest. The Alaska Department of Fish & Game and Prince William Sound Community College joined the Cordova Ranger District in distributing 5,000 "Watchable Wildlife" placemats in Cordova. The placemats note several sites for wildlife viewing along the 50-mile Copper River Highway-Million Dollar Bridge stretch. Highlighted wildlife include bald eagle, brown bear, dusky Canada geese, and salmon.

Chugach National Forest. The Seward Ranger District and the Seward Timber Program improved 1,000 acres of Kenai Peninsula moose winter range using firewood collection, fuel reduction methods, and timber harvest. Part of an ongoing range improvement program for moose, this ecosystem management project also involved increased highway right-of-way clearing. The clearing will improve visibility and reduce the number of moose-automobile collisions. In addition, the project provides a variety of watchable wildlife and natural resource education opportunities.

Chugach National Forest. A waterfowl habitat management partnership between the Cordova High

School and Cordova Ranger District has been successful in decreasing the incidence of mammalian predation on dusky Canada goose nests. The project provides dry nesting sites for the dusky, reducing the levels of predation that have been a significant factor in the decline of the goose population. Nesting on the artificial nest islands has consistently demonstrated higher nesting success rates than geese nesting on mainland habitats.

Rise to the Future!

Chugach National Forest. The Alaska Department of Fish and Game, Alaska Flyfishers, Carrs Quality, Challenge Alaska, Get Hooked on Fishing, Inc., Girdwood Summer Playground, Mountain View Sports, and Youth at Risk were partners with the Glacier Ranger District in sponsoring a *National*

Fishing Week activity. The 3-day fishing event was held at Alder Pond in Portage Valley for 150 children and disabled anglers. The pond was stocked with nearly 5,000 pan-sized fish beforehand, including 20 "lunkers" to provide increased excitement for the anglers. In addition, fishing equipment and picnic supplies were contributed by several Anchorage businesses.

Tongass National Forest. The native community of Kake and the logging community of Rowan Bay were the sites of fishing derbies held under the guidelines of the *National Fishing Derby and Casting Contest Program*. This *Rise to the Future!* program also presented an aquatic education class explaining the life cycle of salmon and the threats to salmon returning to spawn. Trading Union in Petersburg and Trout Unlimited provided prizes and personnel for casting contests. Gunnuk Creek Hatchery personnel helped with advertising and the hot dog feed. The hot dog feed itself was funded and supplied by Hammer and Wikan in Petersburg, Kake Tribal Logging, and the SOS market in Kake. Additionally, members of the Society of American Foresters passed out Sitka spruce seedlings to attendees.

Tongass National Forest. A cooperative project between the Alaska Department of Fish and Game and the Tongass National Forest determined factors limiting fish production. The study area is the 12-mile flood plain of the North Fork Bradfield River that historically has been affected by logging. This *Rise to the Future!* study will produce a rehabilitation plan expected to result in long-term stabilization of the watershed to avoid further decline of fish populations. The Alaska Department of Fish and Game funded \$15,000 of the rehabilitation and the forest funded \$35,000.

On the Chugach National Forest, many visitors participate in wildlife viewing along the Copper River Delta, Prince William Sound, Alaska. (Photo by Sandy Frost, USDA Forest Service)
